What's new?

Upcoming updates in the QReg5-platform.

Contents

User menu

Previously this was just an icon with a small face. Now in the latest version, it's instead the initials of the user that is signed in.

Change unit and **Change language** now goes to a separate settings page.

More on that on the next slide.

Shortcut in the header to change unit

The header now has a shortcut to the settings page where the user can change unit.

If you have more then one unit available, they can go directly to the settings page by clicking on the unit/department name.
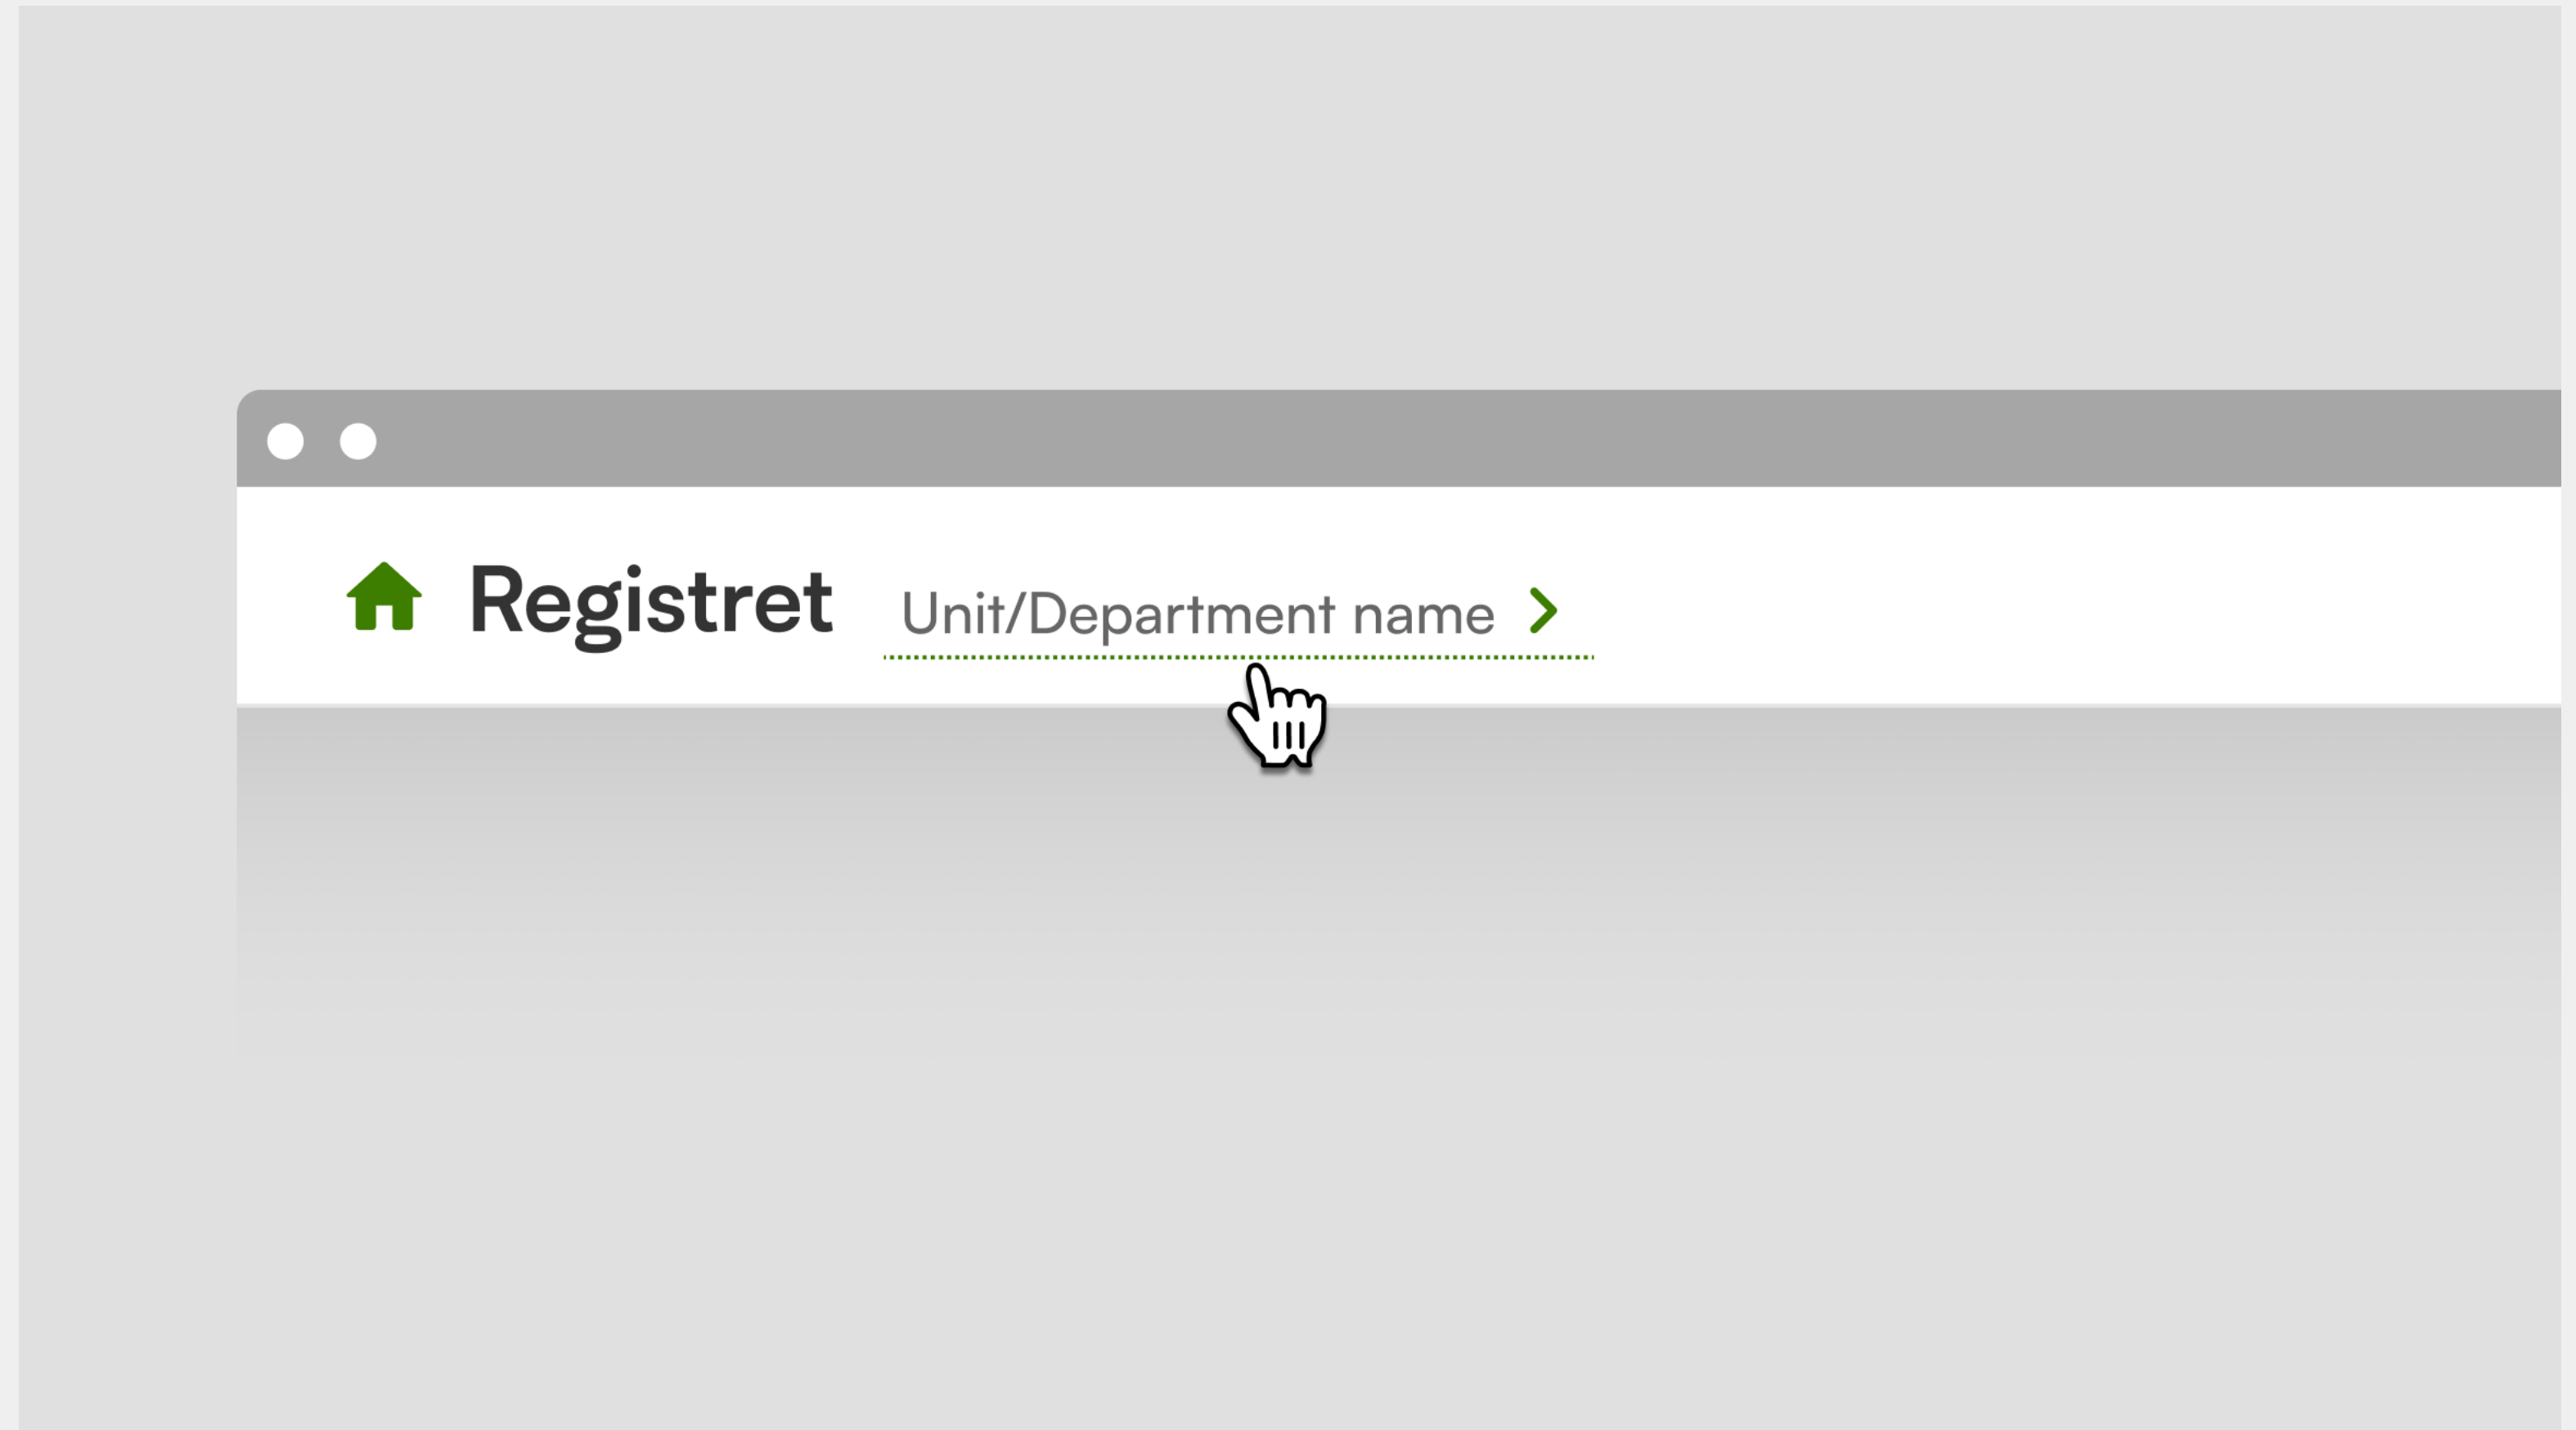

Shortcut in the footer to change language

**Change language is now also in the footer.** This applies for all registries with more then one language available.

Version: **22.0.0-SNAPSHOT**. Registration Version: **36.0.0-M2**. Registry platform QReg5 is provided by **UCR**.
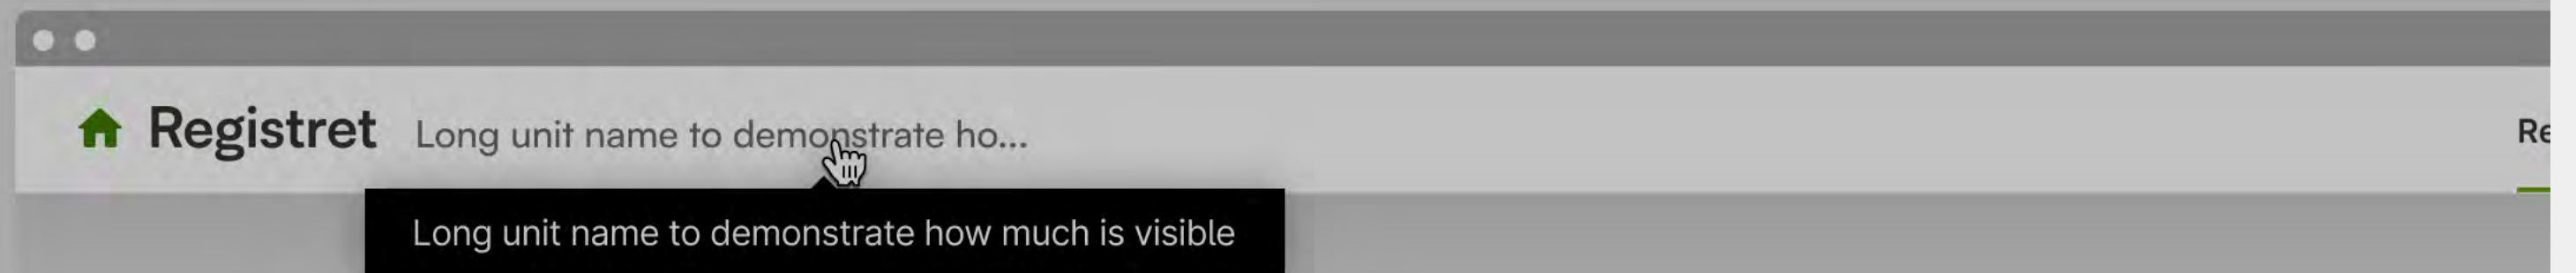

🌐 Change language

Show more of long unit names

Longer names are no longer truncated as early. Now instead, as much of the name as possible is shown depending on the width of the browser window.
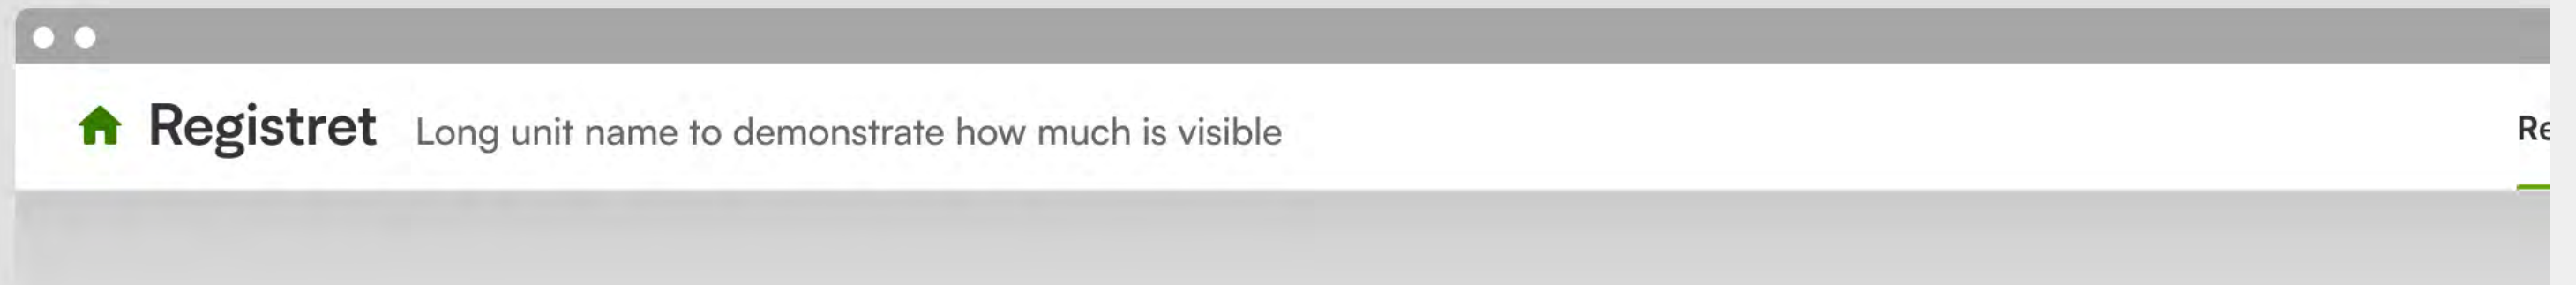

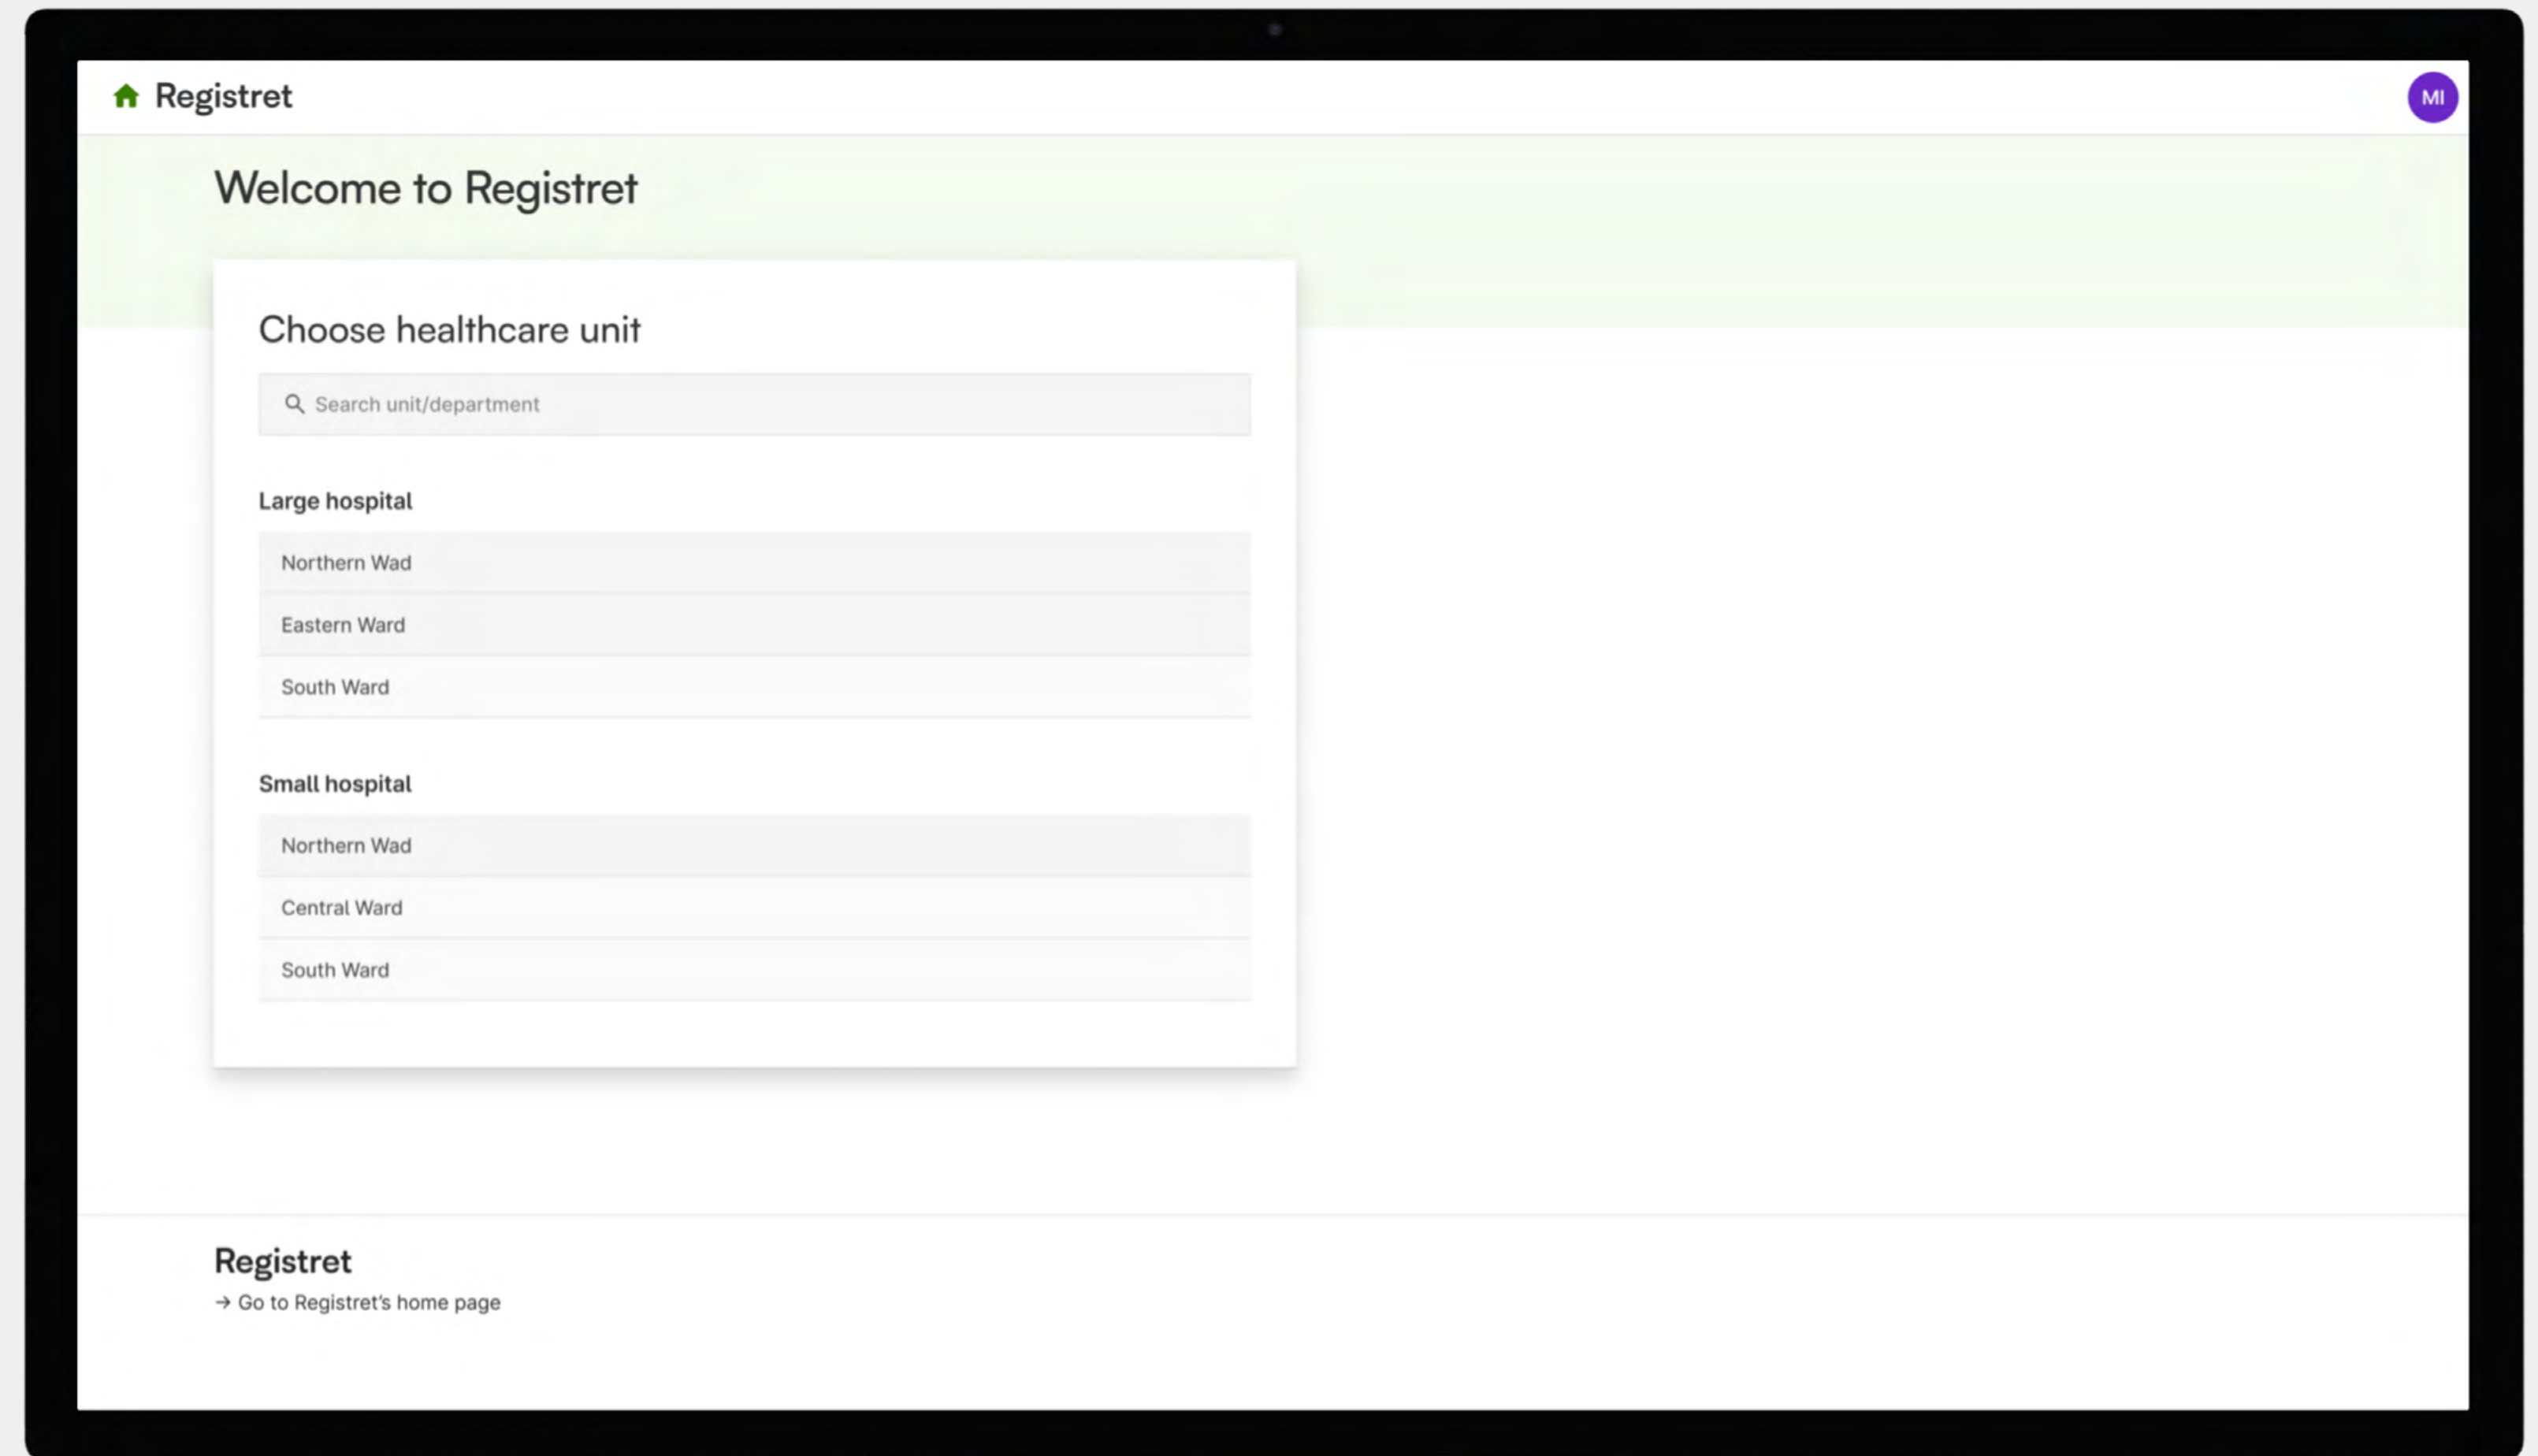

Updated welcome page

Users with more then one healthcare unit to choose from, now have an updated welcome page.

Navigating inside a registration. You can now navigate easily between sections within a registration form.

New colour palette for reports

All charts and graphs now have an updated colour palette. The new colours have been developed so that as many people as posible can read and take in the information in the graphs – even if you have some kind of colour blindness or visual impairment. This change has been made in order to comply to the current legislation on accessibility.

The target areas have also been adjusted. The shades for if a target is partially or completely fulfilled have been changed to a lighter and darker green colour.
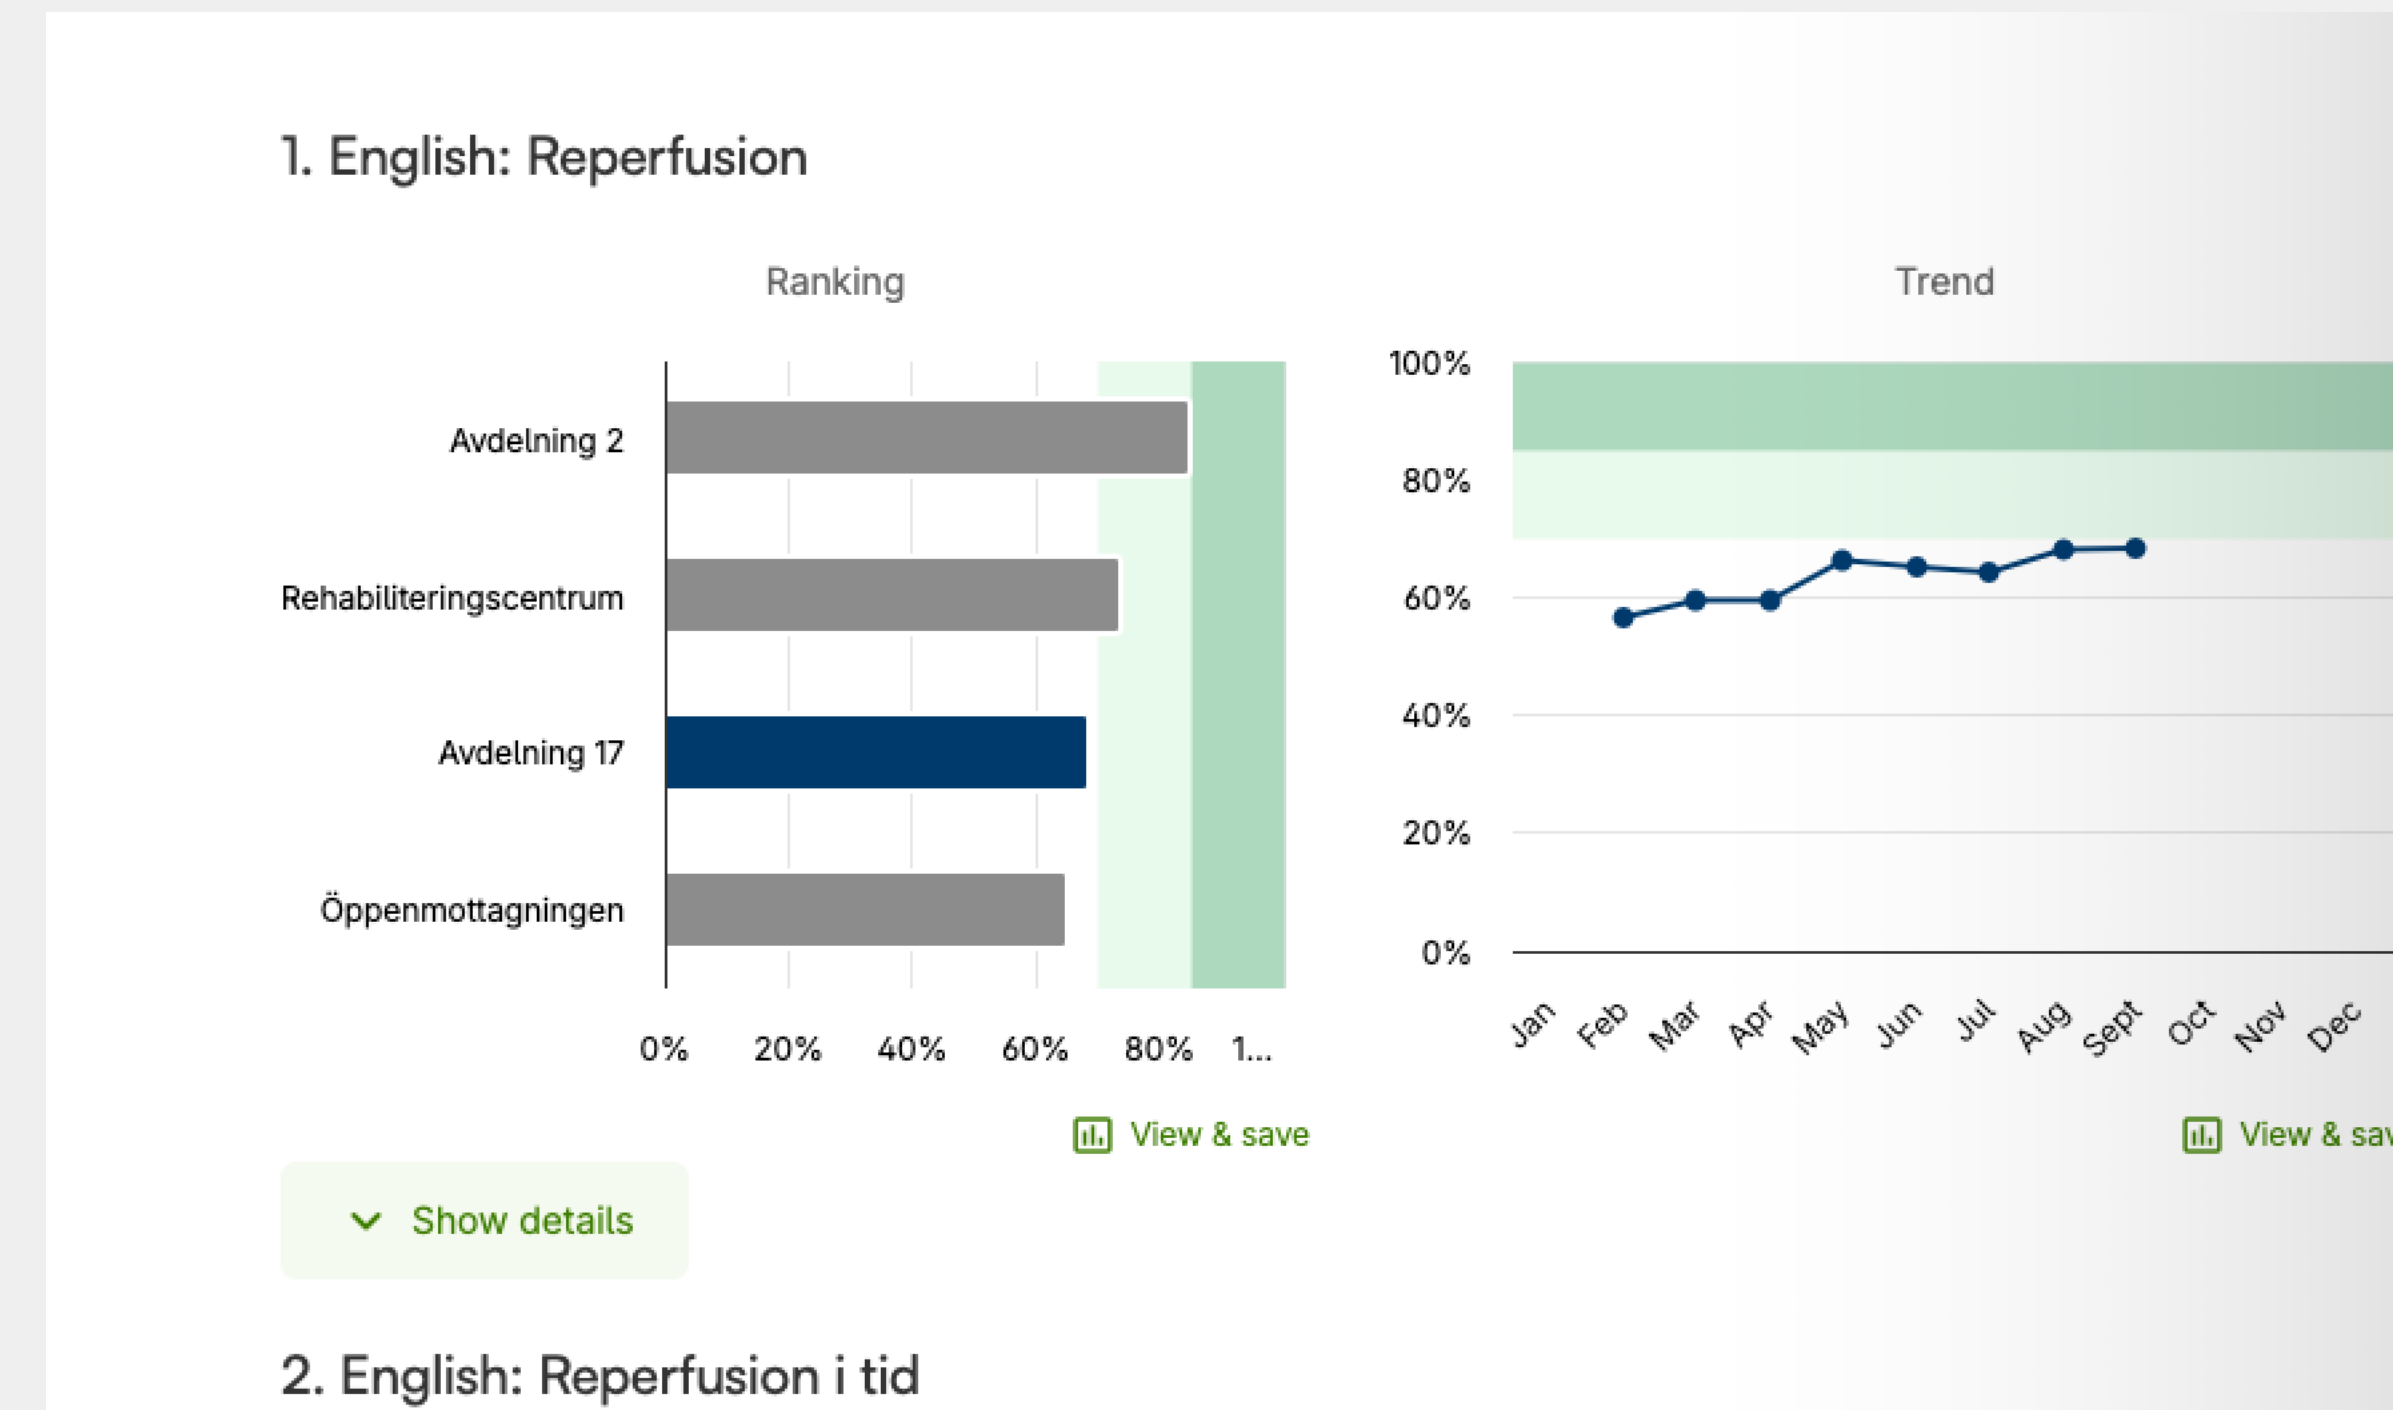

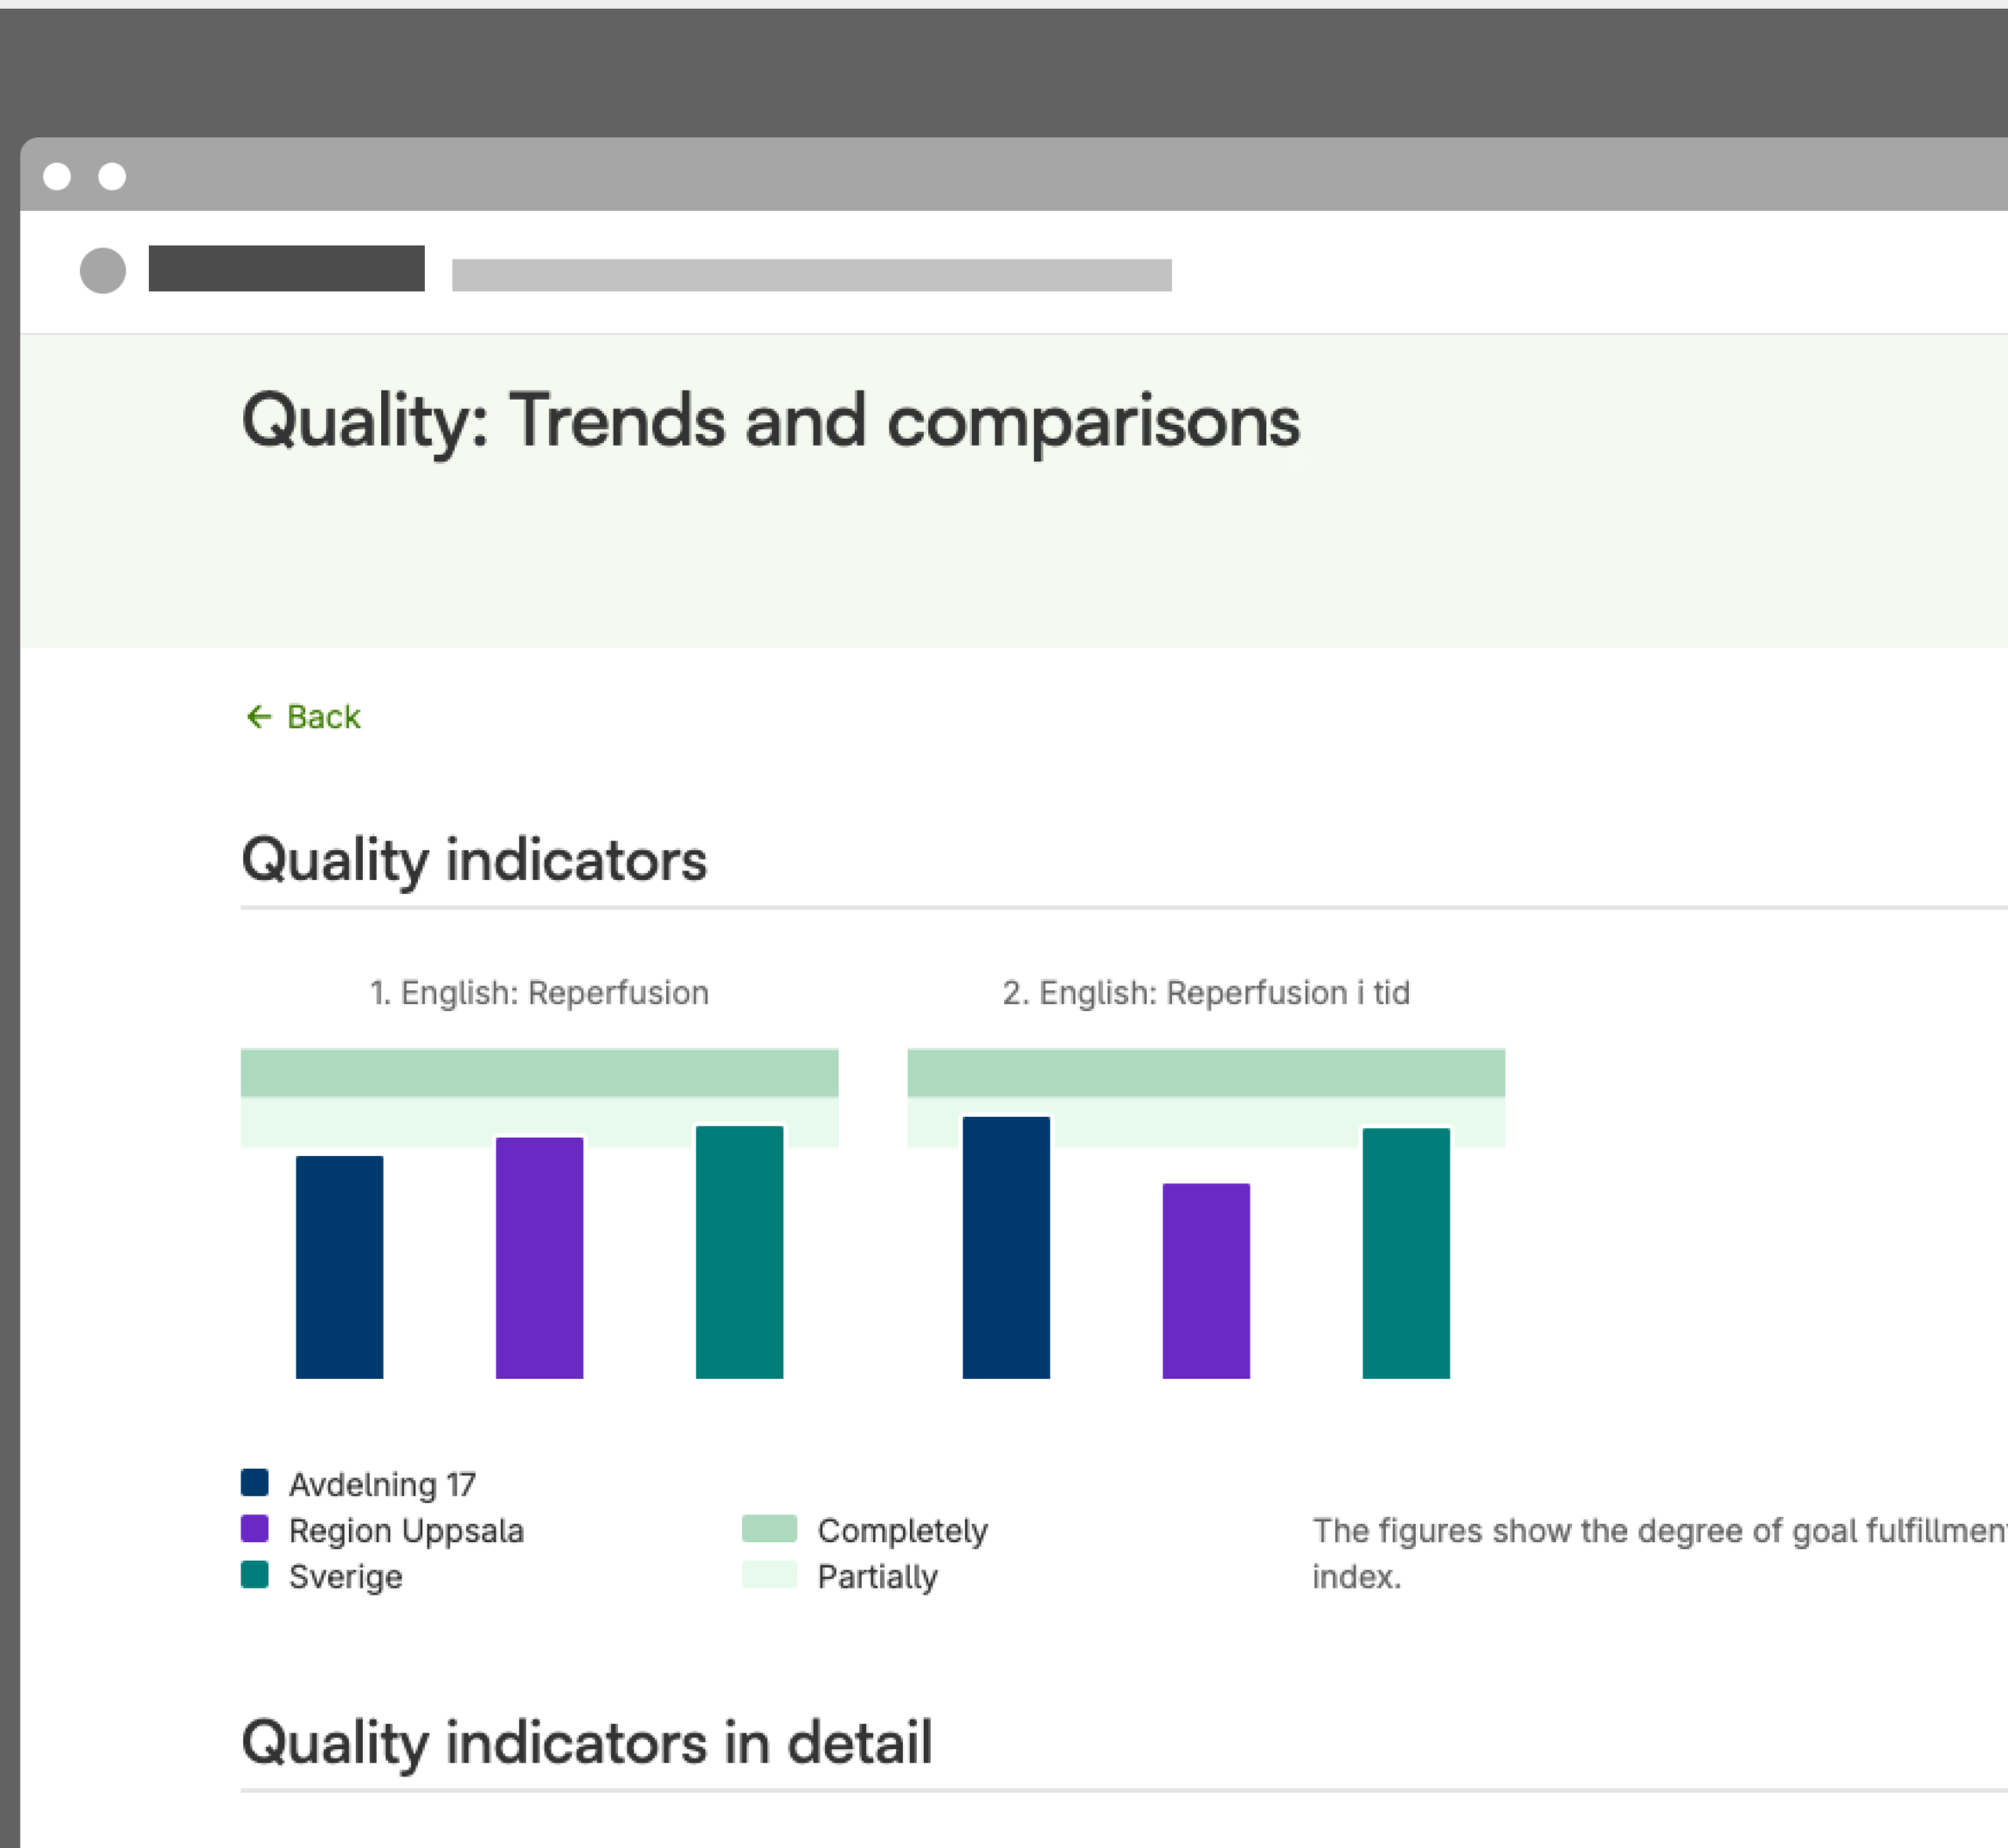

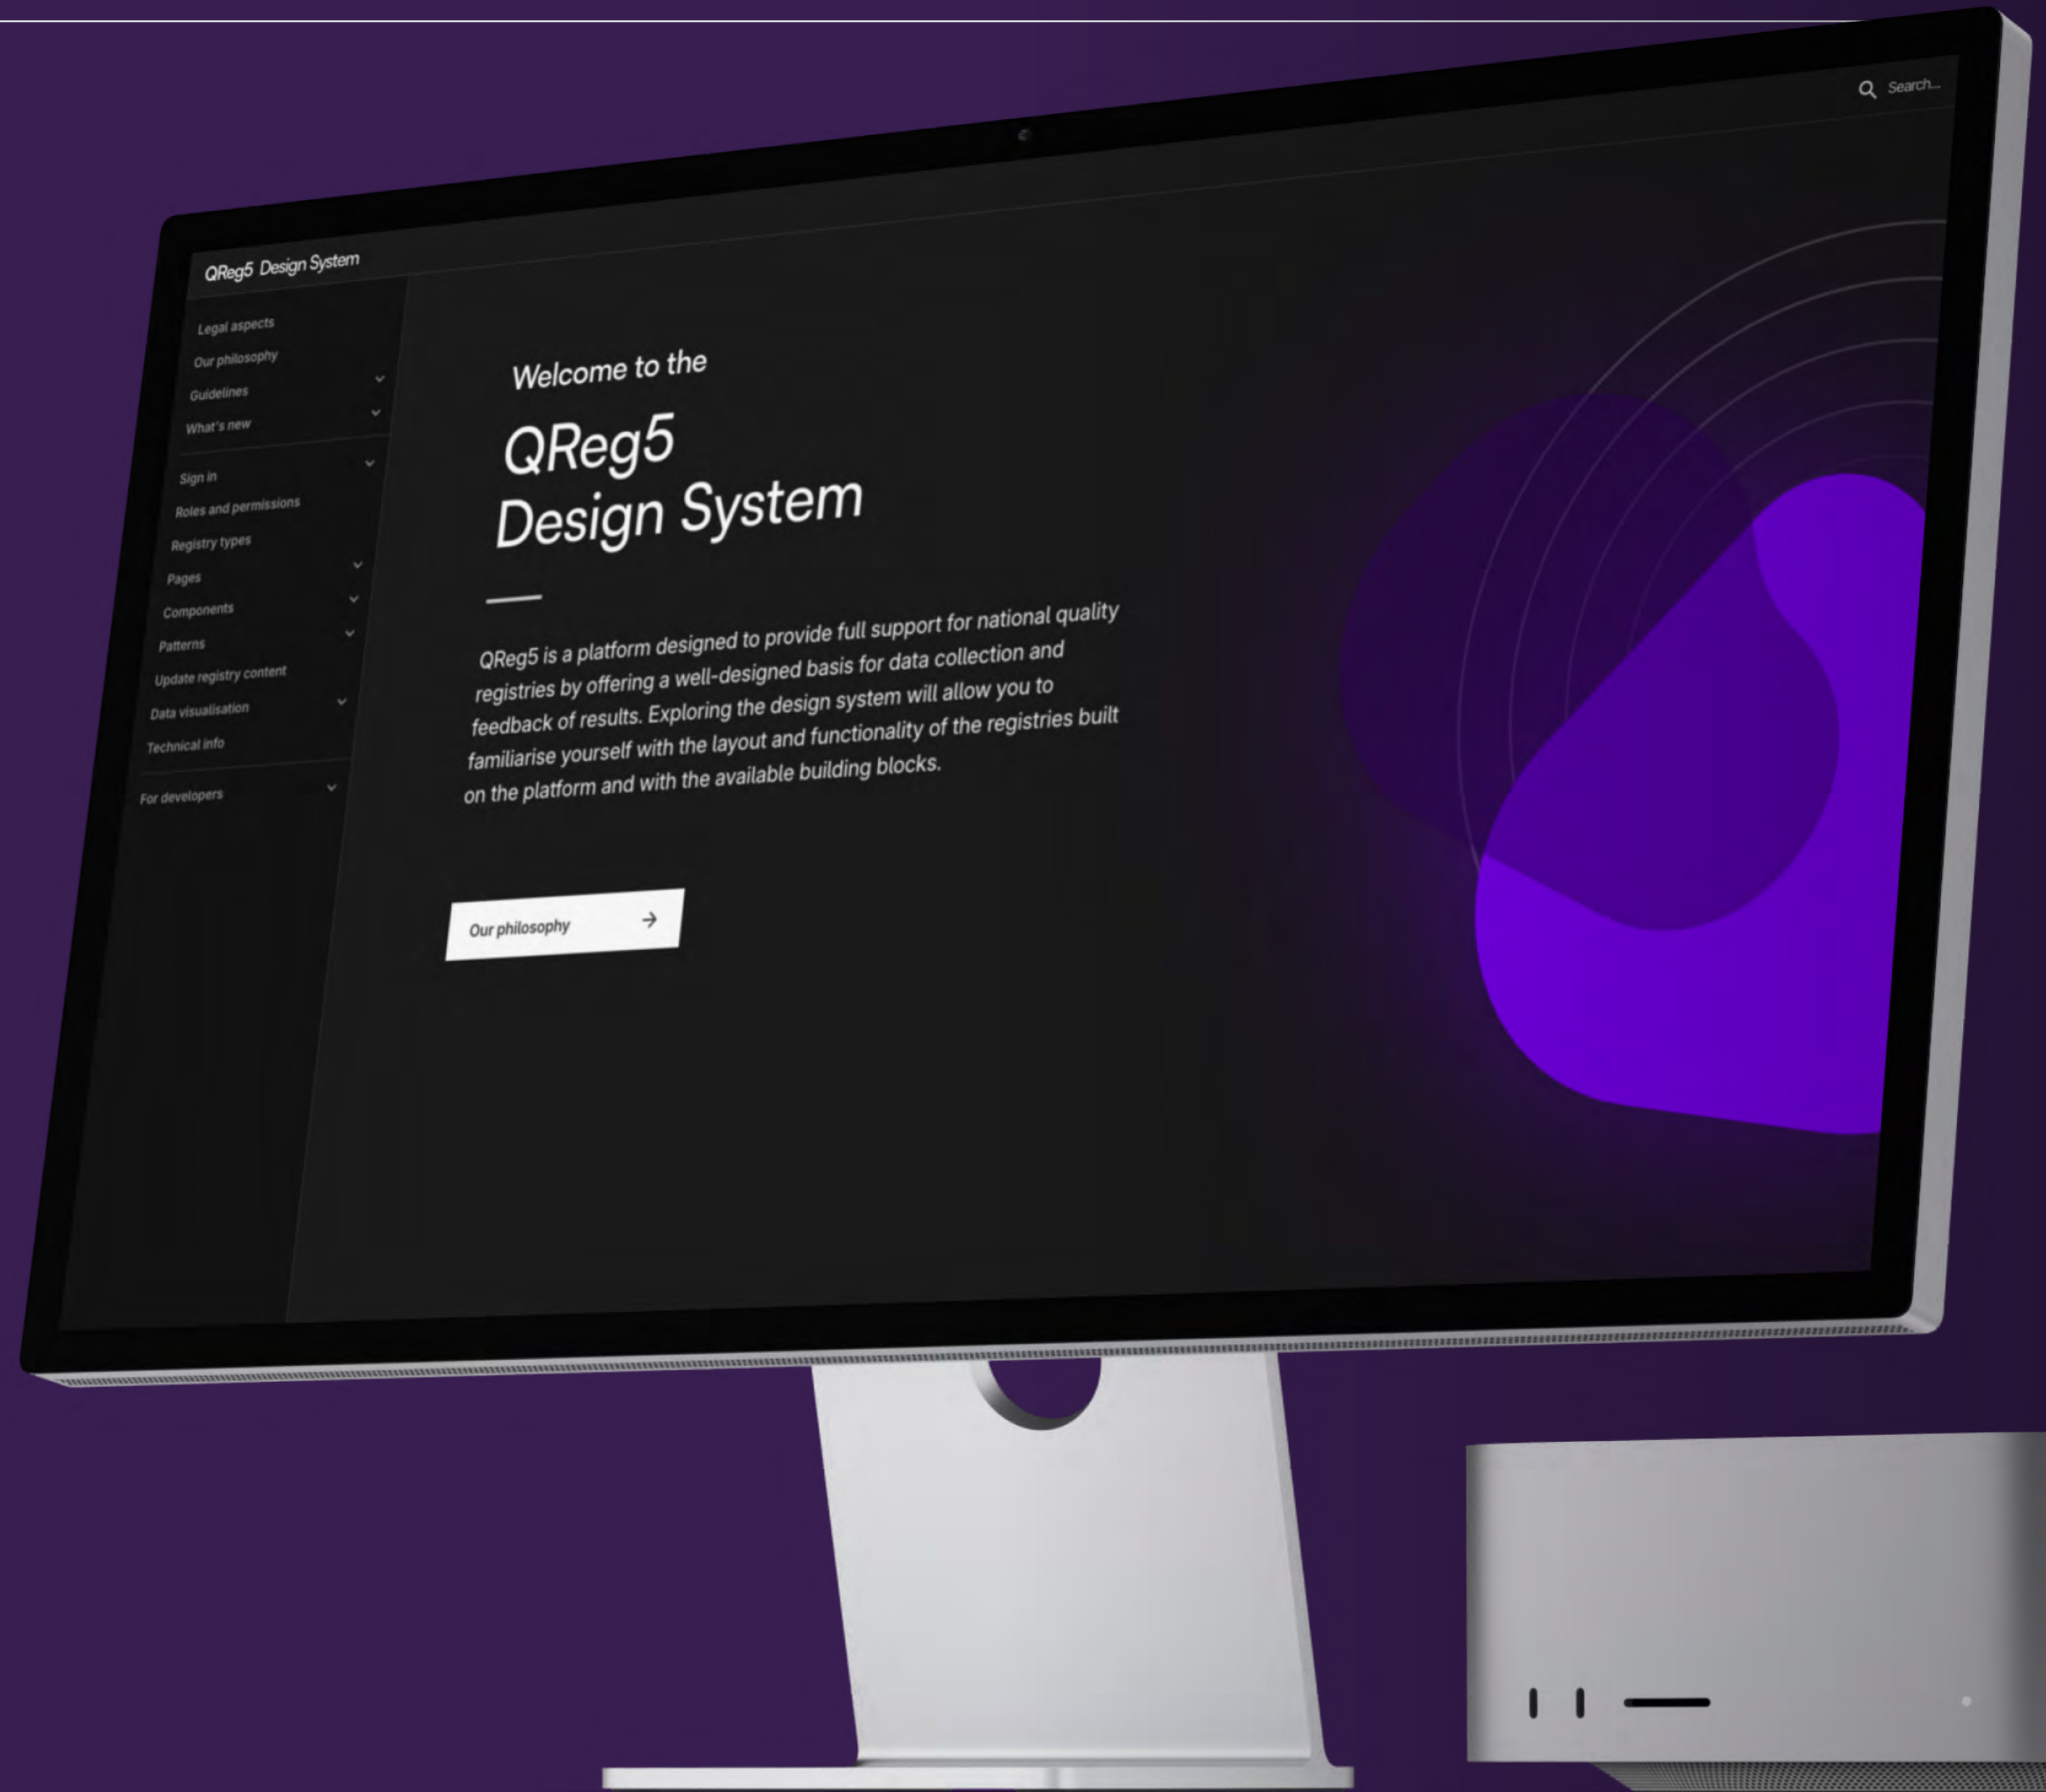

Find out more in the **QReg5 Design System**

Here you can find more examples and descriptions on how the various components of the registry platform are developed.

For developers

Welcome to the

QReg5 Design System

—

QReg5 is a platform designed to provide full support for national quality registries by offering a well-designed basis for data collection and feedback of results. Exploring the design system will allow you to familiarise yourself with the layout and functionality of the registries built on the platform and with the available building blocks.
